## Master data management

PACKAGE 1: DATA HARMONIZATION

Two become one: duplicate recognition, data cleansing and consolidation.

Intelligent. Efficient. Tailor-made.

Every day, you need a huge number of data in your company to handle production, warehouses or customer contacts. The volume of master data is growing continuously and often chaos associated with it. In order to master digital transformation and look forward to a successful future, the objective is to keep the corporate master data current and constantly improve its quality.

FIS supports you with different service packages you can use for laying the foundation for a professional master data management.

FIS

Master data management
PACKAGE 1: DATA HARMONIZATION

Data is the basis for your customers' decisions - no matter if they inform themselves, purchase products or use services. Therefore, correct and uniform master data is indispensable for successful business operations. With the „Master data harmonization" package, we provide you with AI- and tool-based applications that support you in your harmonization project.

This is how it works: In a first step, we transfer your master data to a secure area to ensure that running processes will not be interrupted. By means of check routines and artificial intelligence, the data is analyzed and, for instance, duplicates are automatically identified. In this way, a large part of the data can be checked and corrected. The result of the analysis will be formatted by us and presented to you. Via an intuitive maintenance interface, the data that could not automatically be maintained can subsequently be processed manually by the responsible employees. Here, FIS/MachineLearning is available for you in connection with the FIS/mpm maintenance tool for a specific period of time. Finally, the data is automatically transferred to the production system, duplicate data records are deleted and master data is cleansed.

With the „Master data harmonization" package, you will sustainably increase the quality of your data. The automated and AI-based check saves you time and manual efforts. The „Data harmonization" package is therefore particularly suitable for enterprises that wish to check the quality of their master data fast and without obligation and intend to improve it. With regard to an upcoming SAP S/4HANA transition, the package also provides the necessary basis.

TRANSFER TO SECURE AREA → AI-BASED DATA ANALYSIS → TOOL-BASED MAINTE-NANCE INTERFACE → AUTOMATED DATA TRANSFER

Do you want to permanently preserve this solid data basis created?
Please feel free to contact us to find out how our expertise and our tool can support you in the continuous maintenance and initial creation of data.

Your advantages

✓ Secure area for data maintenance outside the production system

✓ Automated duplicate check

✓ AI-based analysis of your master data

✓ Data check by using individual criteria

✓ Easy mass data maintenance

✓ Consideration of your individual fields

Your benefits

✓ Traceability and transparency in master data management

✓ Uniform procedure due to workflow-supported processes

✓ Sustainable improvement of data quality

✓ High customer satisfaction due to user-friendly and efficient application

DATA QUALITY AND EFFICIENCY

We support you in analyzing your data basis. Tailor-made tools and AI-based cleansing of your master data will save you time and achieve significant data quality improvement.
